New from Wiseco

Titanium Nitride coated rings are designed for extreme racing conditions by providing extended life and sustained power. Utilized by Yamaha of Troy's 2005 factory race team. Packaged individually.

Key features
Reduced friction
Wear resistance
Harder than chrome

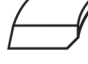

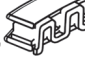

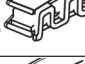

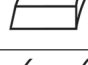

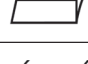

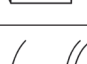

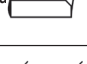

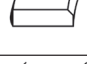

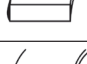

Key benefits
• Resists wear from exhaust bridge that plagues today's high performance two cycle engines.
• Maintains size and geometry for exceptional ring seal providing sustained peak performance.

RINGS • 4-Stroke Rings

All Wiseco rings can be used in cast iron, nickel ceramic platings (Nikasil), boron composite, and Electrofusion bores.
CAUTION: With the exception of the XJ rings, Wiseco 4-stroke rings can NOT be used in chrome plated bores. Engine damage will occur.
*XJ rings are designed to be used in chrome bores.

TAPERED RING • Compressor Sleeves

- Machined from Wiseco sleeve forgings to offer the same toughness as Wiseco's forged pistons.
- Hard anodized and Teflon coated for low friction and prolonged wear resistance.
- Sleeves have a smooth radius that tapers down to the specific bore size.
- Compresses the piston rings smoothly and evenly.
- Greatly reduces the difficulty with installing thin high-performance oil rings.

Cast Iron Sleeved Cylinders: To ensure proper ring seal, it is necessary to hone the cylinder with a rigid or brush hone. DO NOT install a new piston without honing the cylinder to break the glaze. Finish hone with a 280 grit. Cross hatch is necessary to ensure proper ring seal and adequate lubrication. If the cylinder is in good condition, simply honing the cylinder may be enough to restore the bore to an acceptable condition. However in some cases, boring may be necessary to insure the cylinder bore is within the tolerances outlined in the service manual.

Plated Cylinders: (Includes nickel ceramic coatings (Nikasil), chrome, Electrofusion, and boron composite.) If the plated cylinder is in good condition, honing may not be necessary. If deglazing is necessary, DO NOT use a ball hone. Use a rigid or brush type diamond hone. Plated cylinders cannot be bored oversize without replating or resleeving.

Any time a cylinder is bored or honed: All ports must be chamfered. The top of the cylinder should be deburred, and the bottom should be generously chamfered for ease of piston and ring installation. When boring a cylinder with an exhaust bridge, the face of the bridge must be relieved .002"-.004" to allow for bridge expansion. Without proper bridge clearance, engine damage could occur.

IMPORTANT: After honing, the cylinder must be washed with warm soapy water to remove all honing grit. Be sure to wash away any grit that may have traveled into the transfer and exhaust ports during honing. The cylinder is NOT clean until you can wipe the cylinder wall with a clean, oil dampened cloth and it does not pick up any honing grit. Lightly oil the cylinder bore to prevent oxidation and assist with piston installation.

Exhaust Power Valves (2-Stroke engines): When boring cylinders with exhaust power valves the exhaust power valve must be inspected to ensure it does not extend into the cylinder. The exhaust power valve must have approximately .015" clearance from the cylinder bore. Without proper clearance, the exhaust power valve could contact the piston and engine damage could occur. If machining the exhaust power valve is necessary, remove metal only in the area that extends into the cylinder bore. (See illustration)

Gaskets

In addition to our High-Performance Top End Kits (listed throughout our catalog), Wiseco offers Harley® replacement gaskets to meet all of your sealing needs.

- All of our gaskets meet or exceed OEM quality.
- Composite head gaskets include a steel core and a state of the art facing material, featuring a patented transparent coating, to improve the sealing property and prevent corrosion.
- Metal head gaskets are made of stainless steel, featuring a patented thermoplastic coating, to help compensate for all possible micro-imperfections of the engine surfaces.
- Our fiber gaskets are made from materials providing the best mechanical and tensile strength resistance.
- Gaskets come with anti-stick silicon beading (where applicable).
